Appendix 2

Concordance of 160000 Series Numbers with Current British Museum Registration Numbers

Between 1980 and the beginning of 1991 (when systematic cataloguing of the Lachish collection began), approximately 600 of the Lachish objects acquired from the Institute of Archaeology, University of London, were assigned six figure serial numbers all beginning 160–. These serial numbers are now no longer used and were eventually replaced by registration numbers beginning 1980,1214.–. Some of the objects in question, however, had appeared in publications prior to 1991 in which the 160– series numbers were used. It has therefore been decided to include here a concordance of these numbers with the current 1980 series so that objects published in this way can still be located in the handlist.

In a few instances, sherds belonging to one object were initially not recognized as such and were assigned separate serial numbers. These sherds were subsequently identified as all part of the same vessel and thus share the same 1980 series registration number. In other cases, a single serial number was given to a group of objects which were later registered separately and assigned individual 1980 series registration numbers.

Two of the serial numbers (160315 and 160316) were allocated in error to objects which had not in fact come to the British Museum, and so no 1980 series registration numbers have been assigned to them. One of these objects, an inscribed stone weight (serial number 160316), was published as ‘Document 37’ in Mitchell 1988, p.74, and illustrated there by an excavation photograph from the Lachish Archive (Department of the Ancient Near East, British Museum). This object is no longer included in the new edition of the book (see Mitchell 2004, p.8).
